

Data Retention Policy

Purpose

This policy sets how long Harbourline Freight Systems retains different classes of data, and how quickly a deletion request is fulfilled once received.

Retention periods by data class

Retention periods differ significantly by data class, reflecting different legal, operational and security needs. Customer shipment data, which underpins billing history and customer disputes, is retained for 7 years. Application logs, used mainly for short-term debugging, are retained for 90 days. Audit logs, which record security-relevant events such as access changes, are retained for 3 years. Database backups are retained for 35 days on a rolling basis, with each new backup cycle expiring the oldest.

Data class	Retention period
Customer shipment data	7 years
Application logs	90 days
Audit logs	3 years
Backups	35 days

Deletion requests

Where a customer or former employee submits a valid deletion request for their personal data, Harbourline fulfils that request within 30 days, removing the data from production systems and scheduling its removal from backups as they naturally expire. Data that Harbourline is required to keep for legal or regulatory reasons, such as certain financial records, is retained beyond a deletion request until the applicable retention period above has elapsed.

Backups and disaster recovery

Backups exist to support disaster recovery and are not treated as a long-term archive. Restoring from a backup older than the 35-day retention window is not possible once that backup has expired from the rolling schedule.
